November 2020

## SCOPE

- 92 GE 2.72 MW WTGs
- Design for all scopes
- Civil construction
- Foundation construction
- WTG installation
- Underground collection system installation
- Substation construction
- Meteorological tower install
- ADLS install
- 5,500 SF O&M building

## OVERVIEW

The Triple H Wind Farm was completed ahead of schedule, took over 270,000 man hours, accomplished with zero reworks and a satisfied client all while enduring the highest rainfall amounts in 20 years amid a pandemic. The project is developed and owned by the client with subsequent phases already planning to be constructed. Triple H is located in Hyde County just outside of Highmore, South Dakota on 35,000 acres of 60% tillable/40% pasture land. The installation consists of 92 turbines creating up to 250 MW of power.
