

PROJECT PROFILE

Briscoe

LOCATION

Texas

START DATE

February 2015

END DATE

October 2015

SCOPE

- Control terminations and testing
- EPC services
- Equipment installation
- Foundations
- Relay installation and settings
- Steel erection
- Engineering
- Procurement
- Civil
- Turbine foundations, erection and wiring
- Substation
- Underground collection
- 5.34-mile transmission line
- O&M building
- Meteorological towers

OVERVIEW

Wanzek was the EPC contractor for Briscoe, a 150 MW project consisting of 81 GE 1.85 MW turbines. This project included a 34.5:115 kV step-up substation with a single transformer bay, six open air collection feeder circuits and a single step 34.5 kV 15MVAR capacitor bank.
