LOCATION

Fluvanna, TX

START DATE

October 2018

END DATE

October 2019

SCOPE

- Full EPC
- Roads
- Foundations
- Collection, substation, transmission line
- Installation of 79 Vestas V116 2.0 MW WTGs with a 94-meter hub height

OVERVIEW

The Gopher Creek Wind Farm was built on a combination of farm and range land as the second phase of the client's projects in the area. Gopher Creek was constructed during one of the wettest years in 2019 for the Midwest. Wanzek Construction was able to complete the project despite the weather conditions and the impact it had on the ground conditions.
